Radiobiology and Radiopathology (E025480)

Valid as from the academic year 2014-2015

Course Specifications

Lecturers in academic year 2016-2017

Van Eijkeren, Marc  GE17  lecturer-in-charge
De Neve, Wilfried  GE17  co-lecturer
Vakaet, Luc  GE17  co-lecturer

Course offerings and teaching methods in academic year 2016-2017

A (semester 2)  lecture  15.0 h

Offered in the following programmes in 2016-2017

- Master of Science in Biomedical Engineering  3  A
- International Master of Science in Biomedical Engineering  3  A
- Master of Science in Biomedical Engineering  3  A

Teaching languages

English

Keywords

radiobiology, radiopathology

Position of the course

The student is learned to evaluate the effects of interactions of ionising radiation on living cells, tissues and organs. The course builds on the knowledge of radiation effects on cells. This knowledge is extended to tissues and organs and serves as a basis for description of deterministic and stochastic effects. For deterministic effects, a description of the acute effects will be given for partial or total body irradiation (radiation accidents, radiation therapy). Several modulators on these effects are discussed. As for the stochastic effects, both the somatic effects (induction of cancer) and genetic effects will be discussed. A separate chapter will discuss the effects of ionizing radiation in specific situations using examples.

Contents

- Radiation effects on the cellular level: Simple description cellular structures with direct implementation for radiobiology., DNA damage, Modulators of radiation damage
- Radiation effects on tissues and organs: Deterministic effects, Stochastic effects
- Radiation exposure in specific situations with respect to biological effects: Radiation burden to the Belgian public, Cosmic radiation, Naturally Occurring Radioactive Materials - NORM, Human activities, Radiation effects to aircrew, Radiation effects in utero

Initial competences

Biology, basic knowledge of ionising radiation - radiation physics

Final competences

After introducing basic knowledge, at the end of the course, the student will have profound knowledge of the biological effects of ionising radiation in different situations.

Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

(Approved)
Conditions for exam contract
This course unit cannot be taken via an exam contract
