### Course Specifications

Valid as from the academic year 2016-2017

#### Course

**Computational Fluid Dynamics (E040520)**

#### Lecturers in academic year 2016-2017

Degroote, Joris

TW03 lecturer-in-charge

#### Course offerings and teaching methods in academic year 2016-2017

#### Teaching languages

English

#### Keywords

Computational Fluid Dynamics, CFD, Fluent

#### Position of the course

An introduction to computational techniques in fluid dynamics

#### Contents

- Flow equations: conservation equations and state equations, mathematical character of flow equations
- Finite volume methods for diffusion and convection-diffusion: steady state diffusion, steady state convection-diffusion, central and upwind discretisations
- Higher order discretisation of convection-diffusion: quadratic upwind discretisation, non-linear upwind discretisation: TVD-schemes
- Pressure-velocity coupling: pressure oscillations, momentum interpolation, pressure correction algorithms.
- Turbulence models for viscous flows: Reynolds averaging, turbulent viscosity, two-equation eddy viscosity models, RSM and ASM, introduction to LES and DNS
- Grid generation and spatial discretisation: structured and unstructured grids, cell-

(Approved)
centred and vertex-based finite volume methods
• Solution methods for systems of equations: direct methods, iterative methods, multigrid formulation
• Unsteady flows: implicit and explicit time stepping schemes

Initial competences
Transport Phenomena

Final competences
1. Analyse a flow problem with a commercial computational fluid dynamics package.
2. Argue selected models, discretisation techniques, solution techniques, grid and time step size.

Conditions for credit contract
Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract
This course unit cannot be taken via an exam contract

Teaching methods
Lecture, seminar: practical PC room classes

Extra information on the teaching methods
Exercises in the PC room using a commercial package, no programming.

Learning materials and price
Slides and course notes

References

Course content-related study coaching

Evaluation methods
continuous assessment

Examination methods in case of periodic evaluation during the first examination period

Examination methods in case of periodic evaluation during the second examination period

Examination methods in case of permanent evaluation
Report

Possibilities of retake in case of permanent evaluation
examination during the second examination period is possible

Extra information on the examination methods
Report on an exercise which has to be performed autonomously.

Calculation of the examination mark
