

Industrial Electrical Measurements (E032320)

Course size (nominal values; actual values may depend on programme)

Credits 3.0 Study time 90 h Contact hrs 30.0 h

Course offerings and teaching methods in academic year 2017-2018

A (semester 2)	Dutch	project	15.0 h
		guided self-study	15.0 h
B (semester 2)	English	project	15.0 h
		lecture	15.0 h

Lecturers in academic year 2017-2018

De Smet, Herbert TW06 lecturer-in-charge

Offered in the following programmes in 2017-2018

	crdts	offering
Bridging Programme Master of Science in Electromechanical Engineering (main subject Electrical Power Engineering)	3	B
Bridging Programme Master of Science in Electromechanical Engineering (main subject Mechanical Construction)	3	B
Bridging Programme Master of Science in Electromechanical Engineering (main subject Mechanical Energy Engineering)	3	B
Master of Science in Electromechanical Engineering (main subject Control Engineering and Automation)	3	A
Master of Science in Electromechanical Engineering (main subject Electrical Power Engineering)	3	B
Master of Science in Electromechanical Engineering (main subject Electrical Power Engineering)	3	A
Master of Science in Electromechanical Engineering (main subject Maritime Engineering)	3	A
Master of Science in Electromechanical Engineering (main subject Mechanical Construction)	3	B
Master of Science in Electromechanical Engineering (main subject Mechanical Construction)	3	A
Master of Science in Electromechanical Engineering (main subject Mechanical Energy Engineering)	3	B
Master of Science in Electromechanical Engineering (main subject Mechanical Energy Engineering)	3	A

Teaching languages

Dutch, English

Keywords

Sensors, measurements, data-acquisition, microcontrollers

Position of the course

This course covers the electronic measurement of several physical quantities, using sensors, data acquisition and signal processing. This course is divided into two parts. Part 1 describes the general characteristics of a measurement system: principles of signal conditioning (sensor principles, data transmission, data acquisition and signal processing) and characterisation (static and dynamic). Part 2 describes examples for measuring strain, pressure, gasses, temperature, humidity, displacement, power consumption, acceleration,... Attention is paid to sensors made by MEMS technology.

Contents

- Part 1: signal conditioning, characterisation
- Part 2: analogue sensors, digital sensors

- Part 3: introduction of the lab projects

Initial competences

Electronic systems and instrumentation (or equivalent)

Final competences

- 1 Understand and describe the operation of sensors and signal conditioners
- 2 Dealing with inaccurate measurement data in a judicious way; eliminate or take into account interferences and digitizing artifacts.
- 3 Programming of microcontrollers for data acquisition and programming in LabView or Python to process measurement data.
- 4 Collaborate in a small group on a project to design and realize a practical sensor based measurement system.

Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract

This course unit cannot be taken via an exam contract

Teaching methods

Guided self-study, lecture, project

Extra information on the teaching methods

Classroom lectures; Lab sessions

Learning materials and price

Complete syllabus and slide set in English, available via Minerva

Evaluation methods

end-of-term evaluation and continuous assessment

Examination methods in case of periodic evaluation during the first examination period

Oral examination

Examination methods in case of periodic evaluation during the second examination period

Oral examination

Examination methods in case of permanent evaluation

Assignment, report

Possibilities of retake in case of permanent evaluation

examination during the second examination period is not possible

Extra information on the examination methods

During examination period: oral closed-book exam with written preparation; interrogation about lab work. If the number of students is more than 65, the option of a written exam with closed book will be considered. This decision will be announced well in advance of the exam.

Year work: assessment of group work (possibly including peer assessment), deliverables (including hard and software), final report.

Calculation of the examination mark

50% exam + 50% year work
