Course offerings and teaching methods in academic year 2017-2018

A (semester 1) Dutch
- Practicum: 4.0 h
- Excursion: 4.0 h
- Lecture: 24.0 h
- Fieldwork: 4.0 h

Lecturers in academic year 2017-2018

Haesaert, Geert LA21 lecturer-in-charge

Offered in the following programmes in 2017-2018

| Master of Science in Bioscience Engineering Technology: Agriculture and Horticulture (main subject Horticulture) | 4 | A |
| Master of Science in Bioscience Engineering Technology: Agriculture and Horticulture (main subject Plant and Animal Production) | 4 | A |
| Master of Science in Bioscience Engineering Technology: Agriculture and Horticulture (main subject Tropical Plant Production) | 4 | A |

Teaching languages

Dutch

Keywords

Pesticides, biological , physical, physiological and ecological control, resistance, integrated crop protection

Position of the course

These course is linked to crop protection and discuss the mean methods and techniques to control plant diseases, pests and weeds. An integrated approach are used to come to a sustainable crop protection system.

Contents

1. Effects of crop protection on yield level and - quality of crops
2. Overview of the mean methods to control plant diseases, pests and weeds.
3. Pesticides: legislation, toxicological and ecotoxicological characteristics, formulation and adjuvants, mode of action of active ingredients; physico-chemical characteristics
4. Integrated crop protection.

Initial competences

This course build on some final competences about morphology, anatomy and physiology of plants, animal science, organic chemistry, crop husbandry, ecophysiology and crop protection

Final competences

1. To be able to identify a disease -, pest - and weed problem and to develop a correct control strategy
2. Thorough knowledge of several groups of phytopharmaceutical products included their mode of action
3. To be able to use environmental indicators for determining the impact of control measures on environment
4. To be able to develop an integrated crop protection system

Conditions for credit contract

(Approved)
Access to this course unit via a credit contract is determined after successful competences assessment.

Conditions for exam contract
- This course unit cannot be taken via an exam contract.

Teaching methods
- Excursion, lecture, practicum, fieldwork

Extra information on the teaching methods
- Courses are illustrated with up-to-date slides
- Practicum: identify disease-, pest- and weed problem and look for an optimal control strategy taking to account the environmental impact of the measures chosen
- Field trip (experimental farm and farmers) and excursion to a company active in phytopharmaceuticals

Learning materials and price
- Syllabus is available
- Specialized websites (e.g. fytoweb, milieumeetlat)

References

Course content-related study coaching
- Many possibilities to ask questions

Evaluation methods
- end-of-term evaluation and continuous assessment

Examination methods in case of periodic evaluation during the first examination period
- Written examination

Examination methods in case of periodic evaluation during the second examination period
- Written examination

Examination methods in case of permanent evaluation
- Written examination, report

Possibilities of retake in case of permanent evaluation
- examination during the second examination period is possible

Extra information on the examination methods
- Theory: written examination with open and multiple choice questions
- Exercises: permanent evaluation, final test (student gets a disease, pest or weed problem for which they must work out a solution), reports; final test can be done again in the second examination period

Calculation of the examination mark
- Theory: 80%
- Exercises: 20%

(Approved) 2
