

## Population Ecology (C002241)

Course size (nominal values; actual values may depend on programme)

Credits 4.0      Study time 110 h      Contact hrs 35.0 h

Course offerings and teaching methods in academic year 2018-2019

A (semester 1)	Dutch	seminar: coached exercises	10.0 h
		seminar: practical PC room classes	5.0 h
		lecture	20.0 h

Lecturers in academic year 2018-2019

Lens, Luc      WE11      lecturer-in-charge

Offered in the following programmes in 2018-2019

	crdts	offering
<a href="#">Bachelor of Science in Biology</a>	4	A
<a href="#">Preparatory Course Master of Science in Biology</a>	4	A

Teaching languages

Dutch

Keywords

Population numbers, population growth, demography, interactions, spatial structure, exploitation

Position of the course

Students gain insight into underlying processes that determine the functioning of natural populations. This is achieved through the study of theoretical models and applied case studies.

Contents

The course consists of the following chapters: estimation of population numbers, population growth, demography, competition, predation, parasitism, spatially-structured populations, exploited populations. Focus is both on the development of theoretical models (e.g. capture-recapture models, growth models, Lotka-Volterra models, SI-model, Incidence Function model, dynamic pool model) and on their use in particular case studies.

Initial competences

Be able to define ecological concepts in a scientifically sound way; be able to identify and analyze simple ecological problems; be able to apply simple infinitesimal analytic tools.

Final competences

- 1 To report on the basic concepts underlying the functioning of natural populations in accurate scientific language.
- 2 To explain population-ecological models and assess their applicability.
- 3 To apply population-ecological models in ecological problem-solving.
- 4 To understand the interface between population ecology and other biological disciplines.

Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract

This course unit cannot be taken via an exam contract

## Teaching methods

Lecture, seminar: coached exercises, seminar: practical PC room classes

## Learning materials and price

Syllabus available

Price: 20 €

## Course content-related study coaching

During practical classes, population ecological concepts are illustrated with practical examples. During these classes, students can pose general questions on the course's content.

## Evaluation methods

end-of-term evaluation

## Examination methods in case of periodic evaluation during the first examination period

Written examination, oral examination

## Examination methods in case of periodic evaluation during the second examination period

Written examination, oral examination

## Examination methods in case of permanent evaluation

## Possibilities of retake in case of permanent evaluation

not applicable

## Extra information on the examination methods

Practicals: written

Theory: oral examination with written preparation. Students are evaluated on their knowledge of population-ecological concepts and insight into ecological modeling.

## Calculation of the examination mark

Theory 60% ; practicals 40 %
