Offered in the following programmes in 2018-2019

- Master of Science in Nursing and Midwifery crdts offering
  - 3 B

Teaching languages

- Dutch

Keywords

- Primary Health Care, Community Oriented Care

Position of the course

This basic course aims at introducing the basic concepts and structure of primary health care in Belgium. The links between health care and welfare services are elaborated, as are actual evolutions concerning interprofessional cooperation. Students get acquainted with the basic concepts of an integrated systematic approach within the framework of community oriented primary care (COPC). During a project week (COPC week) they get to know COPC in practice, amongst others by developing a 'health profile' for a local community. Hereeto, the students collaborate with student from other disciplines, a.o. medicine.

Through discussion and reflection, student are stimulated to reflect critically and engaged from their own professional background on the strenghts, weaknesses, treaths and opportunities for primary care.

Contents

- Organisation and cooperation in primary health care: concepts, financing, actual developments, analysis of the limiting and enabling factors in relation to an interdisciplinary approach of health problems in primary care
- Health Care needs assessment: definition, methods, data collection in Flanders;
- Community Oriented Primary Care: conceptual framework, illustration of COPC based on interviews with patients and care providers, describing the health needs of the community;
- Interprofessional collaboration and describing care needs based on ICF
- Illness, health and socio-economic health differences

Initial competences

- To apply basic and core concepts, and theoretical models of sociology, antropology and public health on issues in health and health promotion
- To acknowledge the importance of sociology, anthropology and public health in supporting health promotion
- To critically assess new and complex issues in view of societal and ethical aspects, and international developments
- To understand the complex nature of health-related behaviour
- To judge over issues regarding health-related behaviour in a balanced way and with conciousness of the underlying values
- To critically address actual health-related societal issues.

Credits 3.0 Study time 90 h Contact hrs 45.0 h

(Approved)
• To critically address contemporary views on health-related behaviour and their management

Final competences
1. Describing a multidimensional health profile of a specific area (neighbourhood/village/city...) based on different sources of information (individual patients, health care providers, statistical data,...)
2. Describing the care needs of a patient in an individual multidisciplinary care plan, based on the ICF model.
3. Reflecting on the division of roles, strengths and weaknesses of different forms of interprofessional collaboration.

Conditions for credit contract
