# Introduction to Maritime Technology (E055045)

## Course Specifications

From the academic year 2016-2017 up to and including the academic year 2018-2019

### Lecturers in academic year 2018-2019
- **Vantorre, Marc**
  - TW15 lecturer-in-charge
- **Delefortrie, Guillaume**
  - TW15 co-lecturer

### Course offerings and teaching methods in academic year 2018-2019

**A (semester 1)**
- **English**
  - Lecture: 30.0 h
  - Seminar: coached exercises: 30.0 h

**B (semester 1)**
- **Dutch**
  - Seminar: coached exercises: 30.0 h
  - Guided self-study: 30.0 h

### Offered in the following programmes in 2018-2019

<table>

### Teaching languages
- Dutch, English

### Keywords
- Ships, shipping, ship stability, ship propulsion, ship motions

### Position of the course

Introduction to the maritime world, providing basic information on characteristics, construction, stability, propulsion and motions of ships. Thorough knowledge concerning hydrostatics and stability of floating structures and ships.

### Contents
- Shipping as part of the logistics chain: The role of shipowners, shipyards and classification societies.
- General description of the ship as a means of transport or as an implement: Function and short description of some ship types: cargo ships, dredgers, tugs,...
- Ship structures: materials and construction systems.
- Hydrostatics and stability of floating structures: background; influence of free liquid surfaces and of hanging loads, applications (e.g. sheer-legs pontoon); IMO regulation (load line, tonnage, stability).
- Propulsion of ships (introduction): ship resistance; propulsion methods; propulsion machinery.
- Ship maneuvering by means of rudders and thrusters (introduction): fundamentals;

(Approved)
standard maneuvers; maneuvering simulation; maneuvering in restricted waters.
- Motions of ships in waves (introduction): linear wave theory; fundamentals; motions
  in navigation channels; forces on and motions of moored ships.

Initial competences
Specific elements of the mathematics and physics courses from the bachelor's.

Final competences
1. Gain insight into hydrostatics and stability of floating structures.
2. Get acquainted with professional terminology concerning external characteristics,
   structure and primary members of maritime constructions.
3. Analyse the stability of floating structures, including the effects of free fluid surfaces,
   hanging weights, movable cargo.
4. Assess ship stability with respect to international conventions.
5. Distinguish the most important physical causes of a ship's resistance. Reason out
   the most important parameters on which a ship's resistance depends. Define and
   recognise the most usual technologies used for a ship's propulsion.
6. Reason out the manoeuvring behaviour of a ship. Distinguish the most important
   characteristics of a ship's steering equipment (rudder). Define the main techniques
   used to determine and evaluate a ship's manoeuvring behaviour.
7. Get acquainted with the specific hydrodynamic behaviour of a ship in shallow and
   confined navigation areas.
8. Give an explanation for the dynamic behaviour of a floating structure in waves. Be
   able to use professional terminology with respect to the behaviour of floating
   structures in waves.
9. Describe the main players in the shipping world.
10. Analyse specific problems concerning hydrostatics and stability of ships and other
    floating structures.
11. Execute hydrostatic calculations and stability calculations for a ship by means of
    specialised software.

Conditions for credit contract
Access to this course unit via a credit contract is determined after successful competences
assessment.

Conditions for exam contract
This course unit cannot be taken via an exam contract.

Teaching methods
Guided self-study, lecture, seminar: coached exercises

Learning materials and price
Syllabus in English, price 16 EUR.

Course content-related study coaching

Evaluation methods
don of-term evaluation and continuous assessment.

Examination methods in case of periodic evaluation during the first examination period
Open book examination, oral examination.

Examination methods in case of periodic evaluation during the second examination period
Open book examination, oral examination.

Examination methods in case of permanent evaluation
Report.

Possibilities of retake in case of permanent evaluation
Examination during the second examination period is possible in modified form.

Extra information on the examination methods
During examination period: oral closed-book exam, written preparation; written open-
book exam. During semester: graded project reports.

Calculation of the examination mark
- Oral closed-book exam during examination period: 50%
- Written open-book exam during examination period: 25%
Project reports during semester: 25%
A student can only pass if he/she has participated to the three parts.

(Approved)
