

Rational Use of Materials (E065460)

Course size (nominal values; actual values may depend on programme)

Credits 5.0 Study time 150 h Contact hrs 45.0 h

Course offerings and teaching methods in academic year 2018-2019

A (semester 1)	English	lecture	30.0 h
		seminar	15.0 h

Lecturers in academic year 2018-2019

Verbeken, Kim	TW11	lecturer-in-charge
---------------	------	--------------------

Offered in the following programmes in 2018-2019

	crdts	offering
Master of Science in Engineering: Architecture (main subject Architectural Design and Construction Techniques)	5	A
Master of Science in Electrical Engineering (main subject Communication and Information Technology)	5	A
Master of Science in Electromechanical Engineering (main subject Control Engineering and Automation)	5	A
Master of Science in Business Engineering (main subject Data Analytics)	5	A
Master of Science in Electromechanical Engineering (main subject Electrical Power Engineering)	5	A
Master of Science in Electrical Engineering (main subject Electronic Circuits and Systems)	5	A
Master of Science in Business Engineering (main subject Finance)	5	A
Master of Science in Electromechanical Engineering (main subject Maritime Engineering)	5	A
Master of Science in Electromechanical Engineering (main subject Mechanical Construction)	5	A
Master of Science in Electromechanical Engineering (main subject Mechanical Energy Engineering)	5	A
Master of Science in Business Engineering (main subject Operations Management)	5	A
Master of Science in Engineering: Architecture (main subject Urban Design and Architecture)	5	A
Master of Science in Chemistry	5	A
Master of Science in Industrial Engineering and Operations Research	5	A
Master of Science in Civil Engineering	5	A
Master of Science in Chemical Engineering	5	A
Master of Science in Civil Engineering	5	A
Master of Science in Computer Science Engineering	5	A
Master of Science in Computer Science Engineering	5	A
Master of Science in Fire Safety Engineering	5	A
Master of Science in Industrial Engineering and Operations Research	5	A
Master of Science in Sustainable Materials Engineering	5	A
Master of Science in Engineering Physics	5	A
Master of Science in Chemical Engineering	5	A
Master of Science in Engineering Physics	5	A
Master of Science in Bioscience Engineering: Environmental Technology	5	A
International Master of Science in Sustainable and Innovative Natural Resource Management	5	A
Exchange Programme Architecture	5	A

Teaching languages

English

Keywords

Life cycle analysis, 3R's (reduce, re-use, recycle), materials properties, material selection, recycling technology, material scarcity, precious metals, light weight materials

Position of the course

This course takes a closer look on the complete life cycle of different products and on the role materials play in this life cycle. Materials properties determine material selection during design, but also affect the recyclability of the product afterwards. Different recycling options and advanced recycling technologies are discussed. The scarcity debate is elaborated. The differences between the recycling of bulk materials (steel, aluminum, polymers) and special/technology materials (precious metals) and their specific life cycle structure is given. Waste products of one life cycle can offer valuable materials for another life cycle. Dedicated material selection problems are solved, including for example the CO₂ footprint. This will lead to a common knowledge on recycling, the scarcity debate and other related environmental issues.

Contents

- Introduction on the different material groups and their properties. Link between material processing, structure, properties and performance.
- Introduction on life cycle analysis and exercises on materials selection taking into account eco-properties such as CO₂ footprint. The aluminum life cycle as an example of cradle to cradle life cycle.
- Materials selection for light weight vehicles. Overview of different materials available (metals, polymers, ceramics, composites)
- Recycling and life cycle issues for lightweight vehicles. Overview terminology. Complexity of the recycling process, overview of available and advanced recycling technologies.
- Difficulties in lightweight materials recycling. Effect of presence of coatings. Difficulties in recycling polymer matrix composites
- Significance of special and precious metals. Scarcity debate
- Opportunities and challenges for recovering valuable materials. Factors determining recycling efficiency for technology materials. Significance of life cycle structures.

Initial competences

Basics on chemistry and physics as lectured in the bachelor

Final competences

- 1 Understanding the impact of material properties on the material selection process during design and how this affects the recyclability of the final product
- 2 Knowledge on advanced recycling technologies and how material properties can be used during recycling as well
- 3 Understanding the difference between the recyclability of special/precious metals and bulk materials. Insights in complete life cycle and the role of recycling in life cycle analysis
- 4 Being able to enter a broad societal discussion concerning environmental issues, recycling and material scarcity

Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract

This course unit cannot be taken via an exam contract

Teaching methods

Lecture, seminar

Learning materials and price

Slides + syllabus + wetenschappelijke artikels
