Lecturers in academic year 2018-2019

Brass, Marcel	PP02	lecturer-in-charge
---------------	------	--------------------

Offered in the following programmes in 2018-2019

	crdts	offering
Master of Science in Psychology (main subject Teacher Education and Training)	6	A
Master of Science in Psychology (main subject Theoretical and Experimental Psychology)	6	A
Exchange Programme in Psychology	6	A

Teaching languages

English

Keywords

cognitive neuroscience

Position of the course

Cognitive Psychology I is an integral part of the Master's program Experimental Psychology. Given that the program teaches competences that are crucial for researchers, the aim of the course is to give students the opportunity to discuss ongoing research with internationally recognised scientists. Furthermore, the course presents research topics that are usually not covered in the curriculum but are nevertheless relevant in the context of cognitive neuroscience.

Contents

The course will give an overview of recent neuro-cognitive findings in the areas of cognitive neuroscience. One of three research areas will be covered:

1. Intentional control of action

This topic includes research on consciousness, volition and the philosophical question of free will.

2. Cognitive control

This topic includes research on cognitive flexibility, working memory, dual tasking and the implementation of verbal instructions.

3. Embodied cognition

This topic is related to research on the control of complex movements, sense of agency, body representation and role of embodiment in language.

Initial competences

Cognitieve psychologie I, Neuropsychologie

Final competences

- 1 To be able to identify and reproduce the key experiments in a specific research domain.
- 2 To critically evaluate empirical research designs and be aware of the strengths and weaknesses of empirical studies. This includes potential flaws in the design and methodological shortcomings.

- 3 To understand and reproduce the most crucial theoretical ideas and concepts in a specific research domain.
- 4 To become aware that most of the time there are conflicting theories that even sometimes contradict each other.
- 5 To evaluate to what degree a theoretical model or framework is supported by empirical data.
- 6 To become aware that empirical research never provides conclusive evidence for a specific theoretical model.
- 7 To realize that empirical research is embedded in a specific historical, cultural and personal context which determines the empirical question and the way it is investigated.
- 8 To realize that published empirical work is the product of a time consuming work process.

Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract

Access to this course unit via an exam contract is unrestricted

Teaching methods

Self-reliant study activities, lecture: response lecture

Extra information on the teaching methods

The lecture series consists of presentations by external speakers that are followed by extensive discussion. Students have to prepare the lectures by reading research articles . Furthermore, they have to introduce the speaker and lead the discussion. 24 hours are devoted to the lectures and 6 hours to discussion.

Learning materials and price

Background literature will be distributed a few weeks before each lecture through Minerva. No book purchase will be necessary.
