Course Specifications
Valid as from the academic year 2016-2017

Integrated Field Course at Sea (C003354)

Course size 
Credits            3.0        Study time    90 h        Contact hrs  45.0 h

Course offerings and teaching methods in academic year 2019-2020
A (semester 2)    English    work placement 37.5 h
integration seminar 7.5 h

Lecturers in academic year 2019-2020
Vanaverbeke, Jan  WE11  lecturer-in-charge
Vanreusel, Ann     WE11  co-lecturer

Offered in the following programmes in 2019-2020
Master of Science in Marine and Lacustrine Science and Management
3        A

Teaching languages
English

Keywords
Field measurements, observations, lab experiments, data collection (at sea) and field knowledge

Position of the course
The main objective is to convey the philosophy behind and the main practices for conducting field work at sea, with practical hands-on introduction to the main field techniques, experimental research, data acquisition and processing. The final aim is to provide the students with an insight in ecological, geological, physical, ecotoxicological and chemical processes in different ecosystems by means of observations, analysis and experiments in the field and in the lab.

Contents
Different field courses will be organized from which the student can choose two. These field courses will focus on the diversity of different systems and processes respectively from the lacustrine and marine environment. For each system or process an introduction will be given on the environmental, geological and morphological characteristics, including exploration and measurements in the field in order to identify the specific environment. By means of practical exercises including observations, experiments and field sampling (analysis of transects, gradients, time series,...) different aspects of biosphere or geosphere processes in each of the systems will be studied and illustrated.

Initial competences
Insight in the most important oceanographical and limnological processes. Basis knowledge in ecology, ecotoxicology and geology.

Final competences
1 Be able to determine an optimal sampling strategy and experimental design to investigate a given ecological problem and to carry out research autonomously.
2 Identify fauna and flora based on identification guides.
3 Be able to analyse the data obtained with the appropriate tools (e.g. statistical analysis) and critically discuss and report the results (both written and oral).

Conditions for credit contract
Access to this course unit via a credit contract is determined after successful competences assessment

(Approved)
This course unit cannot be taken via an exam contract

Teaching methods
- Integration seminar, work placement

Extra information on the teaching methods
- Lab work and individual data processing

Learning materials and price
- Cost: 300.0 EUR
- field guides

References
- Course material (lecture sides, recent scientific literature) is provided by the lecturers (either in printed or electronic form).

Course content-related study coaching
- Guidance in the field and the lab

Evaluation methods
- continuous assessment

Examination methods in case of periodic evaluation during the first examination period

Examination methods in case of periodic evaluation during the second examination period

Examination methods in case of permanent evaluation
- Job performance assessment, report

Possibilities of retake in case of permanent evaluation
- examination during the second examination period is possible

Extra information on the examination methods
- Students who eschew the non-periodical evaluation cannot pass for the course.
- For the second examination period, the student will be given a special assignment on topics discussed during the field trips.

Calculation of the examination mark
- Evaluation of individual or team report + presentation of the report at the end of the field trip; Evaluation of motivation and degree of participation during the field trip.
