Course Specifications
Valid as from the academic year 2017-2018

Course
Marine Biodiversity (C004047)

Course offerings and teaching methods in academic year 2019-2020

| A (semester 1) | English | lecture | 15.0 h |
| Wind | seminar: coached exercises | 5.0 h |

Lecturers in academic year 2019-2020

- De Troch, Marleen
  - WE11 lecturer-in-charge

Offered in the following programmes in 2019-2020

- Master of Science in Marine and Lacustrine Science and Management
  - 3 credits

Teaching languages

- English

Keywords

- Structural diversity, functional diversity, large-scale biodiversity patterns, tropical ecosystems

Position of the course

This course aims to convey students to ecological (structural), functional and evolutionary aspects of marine biodiversity. Starting from basic biological knowledge, these aspects are taught at different levels of organisation (population, community, ecosystem). This course results in a broad knowledge of marine biodiversity that is essential to understand its role in the sustainable use and management of the marine environment.

Contents

Ecological (structural), functional and evolutionary aspects of marine biodiversity at different levels of organisation (population, community, ecosystem) are explained by means of up-to-date case-studies from marine ecosystems worldwide. Specific topics of the course include, amongst others:

- biodiversity: definitions, factors and gradients
- biodiversity patterns at different spatial levels, with emphasis on large-scale patterns
- use of biodiversity for conservation management: need for indices
- calculating and interpretation of biodiversity indices (practical exercises)
- functional diversity
- diversity versus productivity
- diversity versus stress; stability of a community

The practical part includes (1) guided exercises on calculating biodiversity and (2) critical report (2 pages) on an actual scientific paper on marine biodiversity.

Initial competences

- Basic knowledge in biology

Final competences

To understand large-scale patterns of biodiversity and the underlying processes from an ecological and functional point of view.

Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment.

Conditions for exam contract

(Approved)
This course unit cannot be taken via an exam contract

Teaching methods
  Lecture, seminar: coached exercises

Extra information on the teaching methods
  On a regular basis additional recent literature is cited during the course and is made 
  available by the lecturers.

Learning materials and price
  Printed course notes
  On a regular basis additional recent literature is cited during the course and is made 
  available by the lecturers.

References

Course content-related study coaching
  Discussion sessions

Evaluation methods
  end-of-term evaluation

Examination methods in case of periodic evaluation during the first examination period
  Oral examination

Examination methods in case of periodic evaluation during the second examination period
  Oral examination

Examination methods in case of permanent evaluation

Possibilities of retake in case of permanent evaluation
  not applicable

Extra information on the examination methods
  Written examination with (1) one biodiversity exercise and (2) open questions related to 
  the interpretation of the outcome of this exercise. The interpretation of the exercise 
  requires insight in the theory content of the course. Oral examination after the written 
  preparation, feedback on the report.

Calculation of the examination mark
  oral exam: 100%
