the schoolchild, healthy nutrition, growth, physical activity and sport

Position of the course

This course deals with the most relevant themes on health, growth and development of the age group 3-12. The course aims at gaining scientific knowledge on these subjects, as well as getting knowledge about and being able to apply detection methods, analysis and counselling.

Contents

The following subjects are dealt with in this thematic training programme:
- healthy food for schoolchildren
- obesity prevention for young children
- mouth examination and common deviations in schoolchildren
- deviations in growth
- statistical deviation and physical condition and physical activity in relation to the health and psycho-social development of the schoolchild
- screening of behaviour and emotional problems
- clinical and neurological examination and neuromotor examination of the school child
- deviations in the schooler’s psychomotor development
- developmental coordination disorder
- comorbidity with neuromotor and psychomotor disorders.

This programme provides, according to the age group and the treated themes, the following specific skill training in separate practical sessions.
- Overweight and obesity detection in children and treatment
- Vision and hearing examination for schoolchildren
- The skill training is an integral part of the educational course of age related training units. The specific needed skills are defined according to the age group and themes. Separate seminars provide in the practical skill training.

Teaching methods

Lecture

Extra information on the teaching methods

The learning activities consist of:

• independent processing of scientific information provided via reading tasks (self-reliant study)
• participation in interactive classes which deepen the scientific knowledge – complementary to the independent study
• contribution from personal practice experience in group discussions (intervision and group discussion);
• practice of skills (sessions)

Learning materials and price

A syllabus with course texts, scientific articles and a printed version of the PowerPoint presentations is available. Most of the documents are also available in a digital version. The syllabus with course texts, scientific articles and a printed version of the PowerPoint presentations of the thematic training of this programme is considered to be learning material that prepare for the skill training in which further learning material will be provided.
