Teaching languages

English

Keywords

Environmental toxicology, toxicology, ecotoxicology, (eco)toxicity tests, risk assessment of chemicals, dose-response evaluation, environmental pollution, human health, effects analysis, exposure analysis

Position of the course

The aim of this course is to introduce the students in the theoretical foundations of (eco)toxicology of chemicals and in the principles of exposure, effects and risk assessment of chemicals to man and the environment. A strong focus is on understanding how different physical, chemical, biological and ecological processes contribute to chemicals exposure, effects and, ultimately, risk. Finally, the various aspects of the theory will be brought into practice by means of hands-on training into exposure and effects testing in the laboratory (‘practicum’) and quantitative (real-life) chemicals risk assessment (‘PC exercises’).

Contents

**LECTURES**

General introduction
- What this course is about
- Chemicals are everywhere... but risks?
- Awakening to environmental problems
- (Eco)toxicology and Risk Assessment
- The Risk management process
- Risk Assessment: Risk Characterization through Exposure Assessment and Effects Assessment
- Course overview

Environmental Exposure Assessment
- Emission
- Equilibrium partitioning
- Intra- and inter-media transport
- Transformation (degradation)

(Approved)
Access to this course unit via a credit contract is determined after successful competences assessment. This course unit cannot be taken via an exam contract.

Guided self-study, group work, lecture, practicum, seminar: practical PC room classes

- External Exposure assessment (concentrations in water, air, soil & sediment)
- Internal Exposure assessment (bioconcentration, bioaccumulation & biomagnification)

Ecotoxicology at sub-organism level
- Uptake, biotransformation, detoxification and elimination
- Molecular and cellular effects
- Adverse outcome pathways

Ecotoxicology at organism level
- Factors to consider in ecotoxicity tests
- Standardization and guidelines
- Analysis of toxicity test results
- PNEC derivation
- Secondary poisoning
- Effect QSARs

Ecotoxicology at Population, Community and Ecosystem Level
- Populations: endpoints
- Populations: determinants
- Populations: models
- Communities: experimental setups
- Communities: endpoints
- Communities: determinants
- Communities: models

Ecological risk assessment and legislation
- REACH
- Global Harmonized System (GHS) and Classification, Labelling and Packaging (CLP)
- EU pesticide regulation
- OECD Chemicals programme

Human toxicology and risk assessment
- General framework and aspects of toxicity
- Effects (hazard) assessment
- Exposure assessment
- Risk characterization
- Risk management

**PRACTICUM (WETLAB)**
- Biodegradation test
- Acute ecotoxicity test with *Daphnia magna*

**PC EXERCISES (PCLAB)**
- Biodegradation and dose-response analysis
- Environmental exposure, effect and risk assessment
- Human exposure and risk assessment

Initial competences
- Basic knowledge of biology, ecology, physics and chemistry

Final competences
1. Understand physical, chemical, biological and ecological processes that determine exposure, effects and risks of chemical to man and the environment
2. Know how theoretical foundations of risk assessment are brought into practice in legislation
3. Apply quantitative techniques for dose-response, exposure, effect and risk evaluation

Conditions for credit contract
- Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract
- This course unit cannot be taken via an exam contract

Teaching methods
- Guided self-study, group work, lecture, practicum, seminar: practical PC room classes

Learning materials and price
- Selected chapters from the Van Leeuwen and Vermeire (2007) book - online version available via Springer
- Lecture notes: slides presented during the theory lectures, practicum and PC exercises
- Course notes for the practicum and PC exercises
- Video recordings of theory lectures
- Lecture and course notes are made available via MINERVA

References

(Approved)

Course content-related study coaching
- A dedicated question and answer session will be organized at the end of every theory lecture
- Lecturers and academic assistants can be consulted (after electronic appointment only) for additional feed-back

Evaluation methods
- end-of-term evaluation and continuous assessment

Examination methods in case of periodic evaluation during the first examination period
- Written examination with open questions, written examination with multiple choice questions

Examination methods in case of periodic evaluation during the second examination period
- Written examination with open questions, written examination with multiple choice questions

Examination methods in case of permanent evaluation
- Participation, assignment, skills test

Possibilities of retake in case of permanent evaluation
- examination during the second examination period is possible

Extra information on the examination methods
- Periodic evaluation: closed book exam with open questions and multiple choice questions focusing on a detailed as well as an integrated understanding of the theoretical foundations of (eco)toxicology and risk assessment
- Permanent evaluation:
  - Skill test: closed book test will take place at the end of all theory, practicum and exercises classes; will be closed book; students will need to solve one or more 'integrated problems' for which integrated knowledge obtained during the practicals and PC exercises classes is required
  - Participation during practicals and PC exercises

Calculation of the examination mark
The calculation of the global examination mark will be as follows:
1. Periodic evaluation: 70% of the total mark (12 points of the 20)
2. Permanent evaluation: 30% of the total mark (8 points of the 20)
To pass, the students must score at least half of the points on both the periodic and the permanent evaluation. Students who score less than half of the maximum score for the periodic (i.e. <7/14) or the permanent evaluation (i.e. < 3/6), will only be able to receive a maximum global examination mark of 9/20.
For the group work: if there is a clear difference in the input between the different group members, the examination mark for this part can be different between the different group members.
