GHENT UNIVERSITY

Course Specifications

Valid as from the academic year 2020-2021

Nuclear Instrumentation (C003123)

Due to Covid 19, the education and evaluation methods may vary from the information displayed in the schedules and course details. Any changes will be communicated on Ufora.

Course size *(nominal values; actual values may depend on programme)*

Credits 6.0 **Study time 180 h** **Contact hrs** 52.5 h

Course offerings and teaching methods in academic year 2020-2021

A (semester 1)	English	Gent	lecture	30.0 h
			self-reliant study activities	22.5 h
			online lecture	0.0 h

Lecturers in academic year 2020-2021

Van Hoorebeke, Luc	WE05	lecturer-in-charge
Mondelaers, Willy	WE05	co-lecturer

Offered in the following programmes in 2020-2021	**crdts**	**offering**
Master of Science in Teaching in Science and Technology (main subject Physics and Astronomy)	6	A
Master of Science in Physics and Astronomy	6	A
European Master of Science in Nuclear Fusion and Engineering Physics	6	A
European Master of Science in Nuclear Fusion and Engineering Physics	6	A
Exchange Programme in Physics and Astronomy (Master's Level)	6	A

Teaching languages

English

Keywords

radiation interactions, radiation detectors, signal processing, particle accelerators, radiation sources

Position of the course

The goal of this course is to obtain fundamental knowledge on the techniques and technology used to produce and detect radiation.

Contents

The course consists of 2 separate parts:
Partim Interaction of radiation with matter and radiation detectors

- Radiation interactions: Interaction of heavy charged particles, Interaction of electrons and positrons, Interaction of photons, Interaction of neutrons
- Radiation detectors and their applications: General properties of radiation detectors, Gas-filled detectors, Scintillaton detectors, Semi conductor detectors, Cherenkov detectors, Neutron detection, Pulse processing

Partim Particle Accelerators

- Particle accelerators: Particle optics, Particle optics elements, Electrostatic and induction accelerators, Linear high frequency accelerators, Circular high frequency accelerators, Secundary beam production, Applications of accelerators

Initial competences

basic knowledge of subatomic physics, elementary knowledge of electronics, basic knowledge of statistics and calculus, basic knowledge of theory of relativity, basic knowledge computer programming.

Final competences

1 Insight in radiation interaction processes.

2 Insight in the operation of several types of radiation detectors and their application possibilities.
3 Insight in methods to obtain physical information from detector output.
4 Insight in methods to accelerate and transport charged particles.
5 Insight in techniques to produce particles and radiation.
6 Insight in design methods for modern particle accelerators and peripheral equipment.

Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract

This course unit cannot be taken via an exam contract

Teaching methods

Lecture, self-reliant study activities, online lecture

Learning materials and price

syllabus (available in pdf format)
Cost: 15 EUR

Course content-related study coaching

Possibility to ask questions before and after the lessons and with an appointment. The Ufora system is used.

Evaluation methods

end-of-term evaluation and continuous assessment

Examination methods in case of periodic evaluation during the first examination period

Oral examination

Examination methods in case of periodic evaluation during the second examination period

Oral examination

Examination methods in case of permanent evaluation

Assignment

Possibilities of retake in case of permanent evaluation

examination during the second examination period is not possible

Extra information on the examination methods

permanent evaluation: evaluation of the solutions of the exercises that have to be solved at home during the semester.
period aligned evaluation: oral examination, closed book

Calculation of the examination mark

Permanent evaluation (25%) + periodic evaluation (75%)
For the second examination chance, the marks obtained for the permanent evaluation are retained.
Students that do not pass one of the parts of the course can be declaired as failed for the complete course.
