Course Specifications
Valid as from the academic year 2020-2021

Due to Covid 19, the education and evaluation methods may vary from the information displayed in the schedules and course details. Any changes will be communicated on Ufora.

Course offerings and teaching methods in academic year 2020-2021
A (semester 2)  
English  
UGent  
on campus lecture 15.0 h  
on campus seminar: practical PC room classes 25.0 h

Lecturers in academic year 2020-2021
Vanreusel, Ann  
Sabbe, Koen

Offered in the following programmes in 2020-2021
Master of Science in Marine and Lacustrine Science and Management 3 A

Teaching languages
English

Keywords
Descriptive statistics, design of an experiment, ANOVA, regression, Cluster and ordination

Position of the course
To teach in theory and practice the basic statistical analysis that are most frequently used in quantitative aquatic ecological research.

Contents
The purpose of the course is to introduce some frequently applied univariate and multivariate statistical methods in quantitative research for students with only elementary mathematical background. The theoretical part is focused on the application and the interpretation of the analysis. The practical exercises aim to get familiar with statistical programs and free software R in order to apply these techniques and discuss the results in a correct and extensive way. The techniques dealt with are parametric ANOVA, correlation analysis and non parametric alternatives, Multiple regression, and multivariate analysis like cluster techniques, MDS and PCA.

Initial competences
• Basic statistical principles of distributions and probabilities.
• Excel

Final competences
The most widely used uni- and multivariate statistical techniques in ecological orientated research.

Conditions for credit contract
Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract
This course unit cannot be taken via an exam contract

Teaching methods
On campus lecture, on campus seminar: practical PC room classes, online seminar: practical PC room classes

(Draft -- caution, this is not the final version)
Extra information on the teaching methods

Theoretical classes followed by PC classes to practice in Excel and R software (use of software, application and interpretation)

Learning materials and price

Course notes 7 EURO
Minerva
Electronic handbooks

Evaluation methods

day-of-term evaluation

Examination methods in case of periodic evaluation during the first examination period

Written examination, skills test

Examination methods in case of periodic evaluation during the second examination period

Written examination, skills test

Examination methods in case of permanent evaluation

Possibilities of retake in case of permanent evaluation

not applicable

Extra information on the examination methods

The exam consists of several questions which are mainly practical orientated but needs to be solved written (not on a computer)

In general there are three types of questions
1 Give definitions or explain background of techniques (without formulas)
2 Interpret in a complete and correct way the output of statistical tests
3 Identify correct experimental designs and statistical analysis in order to test particular hypothesis

In addition also PC exercises have to be made

Calculation of the examination mark

written exam: 80%

PC oefeningen 20 %

(Draft -- caution, this is not the final version)
