Marine Food Web Ecology (C004046)

Due to Covid 19, the education and evaluation methods may vary from the information displayed in the schedules and course details. Any changes will be communicated on Ufora.

Course Specifications
Valid as from the academic year 2020-2021

Lecturers in academic year 2020-2021
De Troch, Marleen
WE11 lecturer-in-charge

Course offerings and teaching methods in academic year 2020-2021
A (semester 1) English Gent lecture 20.0 h

Offered in the following programmes in 2020-2021
Master of Science in Marine and Lacustrine Science and Management 3 A

Teaching languages
English

Keywords
Structural biodiversity, functional biodiversity, biomarkers, primary production, plankton, benthos, marine mammals

Position of the course
Advanced course to unravel the biodiversity of aquatic higher organisms operating in crucial units of food webs. This course aims to give insight in structural and functional aspects of biodiversity and is based on knowledge of marine and lacustrine organisms and their environment (Marine and Lacustrine Biology).

Contents
Starting from an overall aquatic food web, the course will give: a general approach of actual research topics as
• structural biodiversity (spatial levels) and its calculation
• functional biodiversity with a more detailed approach of key players in aquatic food webs:
  • primary producers: marine photosynthetic organisms (macroalgae, mangroves, seagrasses and scleractinian corals), ecological roles and ecophysiology
  • zooplankton
  • benthos
  • toppredators and marine mammals in terms of their function, their organisation and their morphological adaptations.

Initial competences
Basic knowledge of the biology of aquatic organisms (both plants and animals).

Final competences
1 To know how to calculate and interpret biodiversity.
2 To get knowledge on the morphological adaptations of aquatic organisms.
3 To understand their functioning in order to maintain aquatic biodiversity in their environments.

Conditions for credit contract
Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract
This course unit cannot be taken via an exam contract

(Approved)
Teaching methods
- Lecture

Extra information on the teaching methods
Lectures are always followed by short interactive discussion sessions.
remark: due to COVID19 on campus lectures can be replaced by online alternatives

Learning materials and price
all study material is available on the online platform Ufora.

Course content-related study coaching

Evaluation methods
- end-of-term evaluation

Examination methods in case of periodic evaluation during the first examination period
- Oral examination

Examination methods in case of periodic evaluation during the second examination period
- Oral examination

Examination methods in case of permanent evaluation

Possibilities of retake in case of permanent evaluation
- not applicable

Extra information on the examination methods
- Oral examination with written preparation. There are typically 2-4 questions. The questions seek an equilibrium between knowledge of the theory (concepts) and understanding of trophic interactions in a food web.

Calculation of the examination mark

(Approved)
