

Sustainable Chemical Production Processes (E071131)

Due to Covid 19, the education and evaluation methods may vary from the information displayed in the schedules and course details. Any changes will be communicated on Ufora.

Course size (nominal values; actual values may depend on programme)
Credits 6.0 Study time 180 h Contact hrs 60.0 h

Course offerings and teaching methods in academic year 2020-2021

Offering	Language	Location	Teaching Method	Hours
A (semester 1)	English	Gent	lecture	30.0 h
			excursion	15.0 h
			group work	15.0 h
B (semester 1)	Dutch		group work	15.0 h
			excursion	15.0 h
			guided self-study	30.0 h

Lecturers in academic year 2020-2021

Van Geem, Kevin	TW11	lecturer-in-charge
Reyniers, Pieter	TW11	co-lecturer

Offered in the following programmes in 2020-2021

Programme	crdts	offering
Bridging Programme Master of Science in Chemical Engineering	6	A
Bridging Programme Master of Science in Chemical Engineering	6	B
Master of Science in Electromechanical Engineering (main subject Control Engineering and Automation)	6	A
Master of Science in Electromechanical Engineering (main subject Electrical Power Engineering)	6	A
Master of Science in Electromechanical Engineering (main subject Maritime Engineering)	6	A
Master of Science in Electromechanical Engineering (main subject Mechanical Construction)	6	A
Master of Science in Electromechanical Engineering (main subject Mechanical Energy Engineering)	6	A
Master of Science in Chemical Engineering	6	A
Master of Science in Sustainable Materials Engineering	6	A
Master of Science in Chemical Engineering	6	B
International Master of Science in Sustainable and Innovative Natural Resource Management	6	A

Teaching languages

Dutch, English

Keywords

Sustainability, petroleum refining, Petro chemical processes, biotechnology, oil, coal, natural gas, biomass, lifecycle analysis, cleantech, process economics, CO2 storage, CO2 utilisation

Position of the course

Introduction to the most important chemical and petrochemical processes for the production of fuels, base and bulk chemicals. Particular attention is paid to technical, economical and environmental aspects. Getting insight into the technical-scientific basis for these processes and in the structure of the chemical industry, petroleum refining industry, the petrochemical industry, biotechnology, biorefinery.

Contents

- Structure of the chemical industry

- Resources, process efficiency, waste, life cycle analysis, exergy
- Conversion of oil, biomass and coal. Production of fossil and renewable fuels. Overview of the final products
- Sustainable production of Base Chemicals: hydrogen; carbon monoxide, ethene; propene; butenes; butadiene, Benzene; toluene; sustainably xylenes, acetic acid, sulfuric acid, ammonia, methanol, etc.
- Sustainable production of second generation chemicals: Styrene, Hetero-atom: vinylchloride, Ethylene Oxide, Adipic Acid, Caprolactam, Maleic Anhydride
- Important sustainable Processes: capita selecta: Steamreforming of natural gas; partial oxidation to synthesis gas or ethyne, Steam Cracking, Catalytic cracking; Catalytic reforming, High-Pressure Polyethylene, bioethanol
- Plant visits: unit operations, sustainability, economics, continuous versus batch processes

Initial competences

Physical & Organic Chemistry, Heat and Material Transport, Unit Operations in the Chemical Industry

Final competences

- 1 Understanding the following concepts: crude oil, distillate, residue, bulk chemicals, sustainability, life cycle analysis, biomass, process simulation, CO₂ emissions
- 2 Obtain insight in the structure of chemical industry.
- 3 Obtain insight in the structure of a refinery.
- 4 Obtain insight in production methods of important chemicals.
- 5 Obtain insight in production of selected second generation chemicals.
- 6 Obtain insight in implementation of large-scale processes.
- 7 Evaluation of process efficiency and sustainability.
- 8 Identification of the most important streams in a refinery and treatment processes.
- 9 Process simulation.
- 10 Process economics.

Conditions for credit contract

Access to this course unit via a credit contract is determined after successful competences assessment

Conditions for exam contract

This course unit cannot be taken via an exam contract

Teaching methods

Guided self-study, excursion, group work, lecture

Extra information on the teaching methods

[hoorcollege](#) 20 uren, [groepswork](#) 10 uren, [practicum](#) 20 uren, [project](#) 10 uren

Learning materials and price

Syllabus in English (electronically available on the following web-site: <https://ufora.ugent.be>). Slides in English available on <https://ufora.ugent.be>

Course content-related study coaching

Begeleiding door assistent

Evaluation methods

end-of-term evaluation and continuous assessment

Examination methods in case of periodic evaluation during the first examination period

Oral examination

Examination methods in case of periodic evaluation during the second examination period

Oral examination

Examination methods in case of permanent evaluation

Report

Possibilities of retake in case of permanent evaluation

examination during the second examination period is not possible

Extra information on the examination methods

During examination period: oral closed-book exam, written preparation
During semester: graded project reports. Second chance: Not possible

Calculation of the examination mark

Evaluation throughout semester as well as during examination period. Special conditions: none; project reports: 6/20; exam: 14/20
