

African Mineral Resources: the Science and Politics of Sustainable Extraction of Mineral Resources (1002408)

Due to Covid-19, the education and evaluation methods may vary from the information displayed in the schedules and course details. Any changes will be communicated on Ufora.

Course size (nominal values; actual values may depend on programme)
Credits 5.0 Study time 150 h Contact hrs 45.0 h

Course offerings in academic year 2020-2021

A (semester 2) English Gent

Lecturers in academic year 2020-2021

Musa, Manzi

UPPSAL lecturer-in-charge

Offered in the following programmes in 2020-2021

crdts offering

[International Master of Science in Sustainable and Innovative
Natural Resource Management](#)

5 A

Teaching languages

English

Keywords

Position of the course

Contents

Future availability of minerals and expected demand trends with respect to economic development. Projections of global demand and supply of minerals and metals over the next century. The genesis of African ore bodies and great mineral fields with emphasis on stratigraphy, tectonics, site classification, depth, and other geoscientific and technical parameters. Deposits of resources such as chrome, copper, diamonds, gold, iron, manganese, platinum group elements, uranium, rare earth elements, and vanadium. Fossil fuels and energy minerals.

Geoscientific exploration of primarily Sub-Saharan deposits and suitable explorations strategies for currently under-explored regions within Africa. Economic geology and feasibility of exploitation. Current issues related to natural resource exploitation such as illegal mining, smuggling, mining rights, worker safety, and other socio-political issues. Development of mining policies and the connection between mining and economy and the globalized market in various countries. Environmental issues like waste rock management, tailings, acid mine drainage, air and water pollution, greenhouse gas emissions, and other local and global impacts from mining operations. The course will make extensive use of case histories.

Initial competences

Final competences

On completion of the course the student shall be able to:

critically assess and describe Africa's major mineral provinces and resources, their properties and suitability for exploitation
provide informed insight and proficient discussion around exploration and exploitation strategies for primarily Sub-Saharan resources
account for management and awareness of social challenges of sustainable mining in Africa
critically evaluate potential environmental hazards and suitable mitigation strategies

Conditions for credit contract

This course unit cannot be taken via a credit contract

Conditions for exam contract

This course unit cannot be taken via an exam contract
